I do (see attached). ICF/NTP took my old protocol and beefed it up a bit, but since we are only working with them up to the data extraction (and possibly risk of bias) stage it does not cover everything. Should be helpful nonetheless.

Subject: Screening Criteria and Search Strategy for Paraquat SR.docx

Hi Austin,

Aaron has been appointed the epi lead for paraquat, and I found this older draft of your paraquat screening criteria I wanted to send to him, bc I found this document very helpful as I began the atrazine project. If you have an updated version of this document, can you send it to Aaron?

Thank you for your help with this!

- Stacy
